1C:ERP

Flexible ERP solution, empowering enterprises to meet the digital challenges of today's business, grow faster and lead their markets.

- Based on the modern best practices of enterprise management and the experience of 25,000+ 1C:ERP implementation projects.
- Build on flexible and powerful 1C:Enterprise Platform supports web-access, mobile device-access, and cloud technologies.

Why 1C:ERP?

Fast implementation

The implementation of 1C:ERP is almost twice as fast as the implementation of other ERP-systems. It is comparable to the implementation of low code solutions. Why is this the case? Its fast set-up, rapid blueprint, rich features, scalability, user- friendly interface, and customizability.

Flexible deployment and delivery

Built on the powerful 1C:Enterprise development platform, 1C:ERP provides unlimited flexibility and can be fine-tuned to automate specific and even unique business processes in an organization. It's a platform-independent (Windows, Apple, Linux) solution that can work with all world-class DBMSs (MS SQL Server, PostgreSQL, IBM DB2, Oracle Database) and smoothly integrates with existing solutions (TMS, WMS, CRM, accounting, etc.).

Rich solutions for the production industry

1C:ERP helps manufacturing companies manage continued business growth and support changes in production technology. The system provides both a simple and complex workflow for all "make" strategies and their different scenarios: make-to- order, make-to-stock, and design, discrete, and process production.

Based on feedback from real ERP projects on the 1C:Enterprise platform

Productivity

- Increase in output by 36%
- Increase in workforce productivity by 36%
- Reduced expense of material resources by 16%
- Reduction of production cost by 9%

Overall efficiency

- Acceleration of order processing by 75%
- Reduced time of order execution by 26%
- Decrease in operating and administrative expenses by 17%
- Revenue growth by 14%

Current assets

- Warehouse turnover increased by 28%
- Reduction of accounts receivable by 22%
- Reduction of inventory by 24%

Reporting

- Management reports preparation 2.9 times faster
- GAAP and IFRS reports preparation 2.8 times faster

1C:ERP: Best Business and Industry Functionality

Enterprise performance monitoring

You can control enterprise processes in real time. From a bird's eye view, you can analyze critical deviations from the plan figures, and identify negative trends and growth areas, in real time.

Production management

With this subsystem a company can implement its own Digital Strategy of transition into Industry 4.0 technologies, therefore meeting the challenges of high-speed business in very dynamic industries.

Cost management

The cost management subsystem provides flexible tools for controlling costs of the material cost flow, and the consumptionof resources triggered by manufacturing, administrative, and commercial activities and all units of the company.

Finance

The finance management subsystem includes sound solutions for Treasury management and Financial accounting, and reporting management for non-financial companies.

Budgeting

With the budgeting subsystem, companies can manage the budgeting process in a very flexible way, following top-down as well as bottom-up approaches.

Customer relationship management (CRM)

Customer relationship management is tightly related to the sales and marketing subsystems and supports scenarios such as: the development and following of a customer relationship strategy, customer experience tracking, the tracking of communications, notifications, the segmentation of customers, and identifying more profitable and emerging customers, etc.

Sales management

In Sales management, all functions are developed around the Order-to-cash process and provide workflows and controls that help speed-up the Order-to-sale process in manufacturing, wholesale and retail businesses.

Procurement management

In Procurement management, all functions are developed around the Procure-to-pay process and provide workflows and controls that help speed-up the Procure-to-pay process in manufacturing, wholesale and retail businesses.

Inventory management

Inventory management is a system for tracking inventory levels, managing the demand of various orders, and managing the internal and external movements of goods.

1C:Enterprise

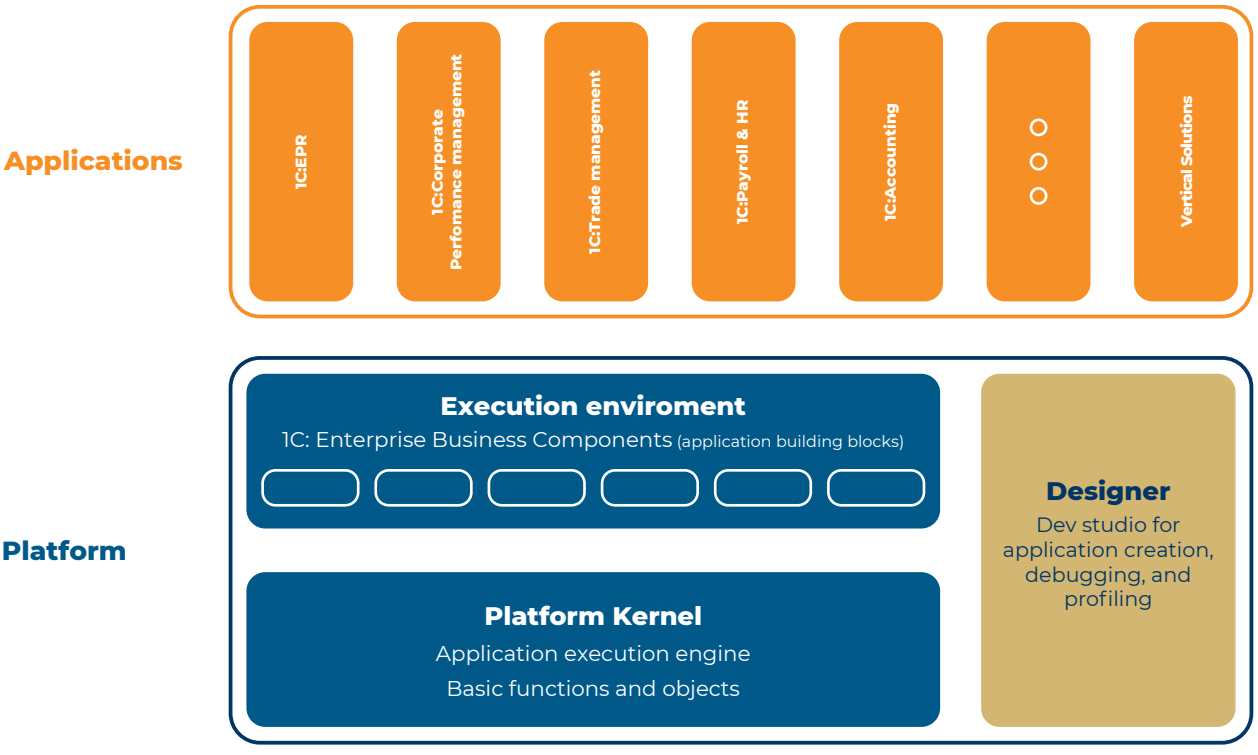
1C:Enterprise is a universal cloud and on-premise system of programs for automating a company's financial and wider operational activities. 1C:Enterprise has the breadth of capability to address the diverse needs of today's business. This is achieved through "configurability" – the ability to customize the system based on the specific needs of companies and their business processes.

Pre-built objects for business automation

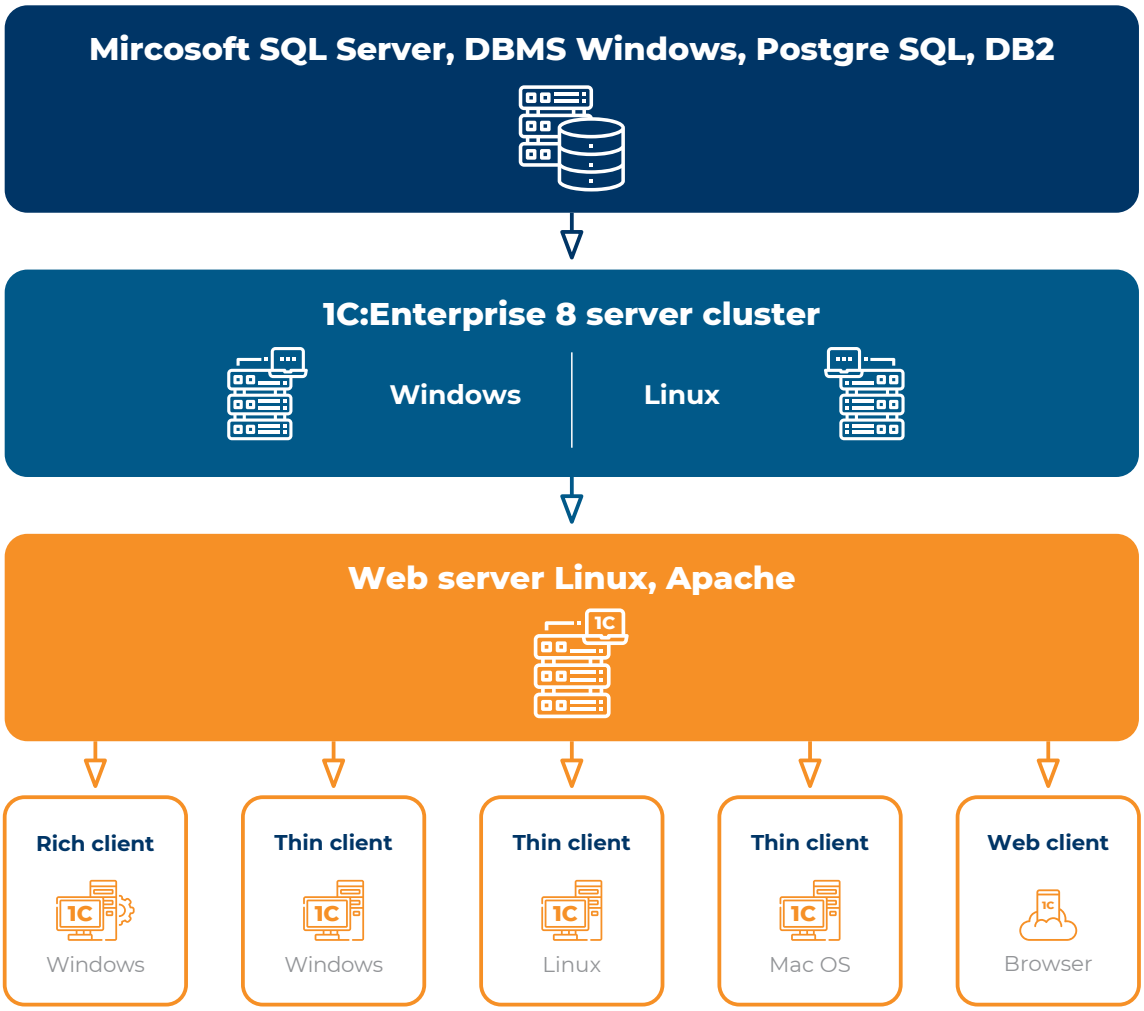
On-premises, cloud or mobile deployment

Open-code applications

Easily integrated with third-party solutions



Cross-platform architecture



Integration functionalities

1C:Enterprise platform supports:

- Openness and integration with practically any software and hardware
- Powerful XML Support
- Internet protocols: HTTP, OData, SMTP, POP3, FTP, IMAP
- High-productivity work with Internet services
- Automatic REST
- Other integration technologies (COM, TXT, DBF, XLS, external components)
- Integration with equipment (barcode scanners, credit card terminals, printers, etc.)
- Exchange mechanisms in the typal applied solutions (ready mechanisms with the ability to expand and customize)

1C:Enterprise For Your Industry

Applications based on the 1C: Enterprise platform handle a broad range of corporate accounting and management tasks. Customers can choose the 1C:Enterprise-based applications that best suit their company's needs.

- **State and municipal administration**
- **Health care and medical industry**
